desktops. All visualizations will be created using Chart.js, and the entire application will be contained within a single HTML file styled with Tailwind CSS, as you've requested.

U.S. School Bullying Statistics

Infographic

Jul 22 at 8:48 PM

I have now generated the single-page application infographic.

This immersive document visualizes the key statistics from the provided report on bullying in U.S. schools. It follows a clear narrative, starting with the overall prevalence and trends, then delving into the specific types, locations, and demographic disparities of bullying. Finally, it highlights the impact on students and the critical role of reporting and bystander intervention.

The design uses a vibrant and professional color scheme, modern typography, and a

The State of Bullying in U.S. Schools

The Hidden Scars

The impact of cyberbullying on young students is severe. A vast majority of targeted tweens report damage to their self-esteem, showing that the wounds are often invisible but deep.

69%

Of cyberbullied tweens feel worse about themselves.

The Silence of Victims

A significant reporting gap exists. Less than half of bullied students notify an adult at school, often due to fear or a lack of trust that anything will be done to help.

44%

Of bullied students tell an adult at school.

The State of Bullying in U.S. Schools

A Positive Trend, But a Long Way to Go

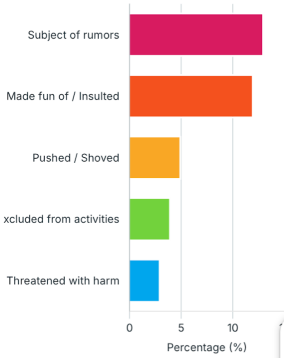

While the overall rate of bullying has seen a significant decline over the past decade, the problem persists. The chart below tracks the percentage of students aged 12-18 who reported being bullied, showing progress but underscoring the need for continued vigilance.

Year	Percentage (%)
2010-11	28
2018-19	22
2021-22	19

What Bullying Looks Like

Bullying is more than just physical aggression. Verbal and social bullying, like spreading rumors and name-calling, are the most common forms, causing significant emotional and psychological harm.

Type of Bullying	Percentage (%)
Subject of rumors	12
Made fun of / Insulted	11
Pushed / Shoved	5
Excluded from activities	4
Threatened with harm	3

The State of Bullying in U.S. Schools

Who is Most Affected?

Bullying does not affect all students equally. Significant disparities exist based on gender, grade level, and sexual orientation, revealing which groups are most vulnerable.

By Gender

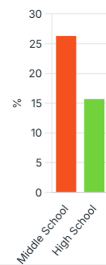

Female students report higher rates of being bullied overall.

Gender	Percentage (%)
Female	22
Male	17

By Grade Level

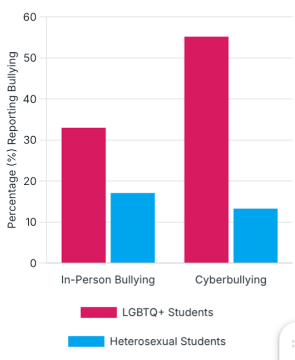

Bullying peaks in middle school, a critical time for social development.

Grade Level	Percentage (%)
Middle School	26
High School	16

LGBTQ+ Youth

LGBTQ+ students face dramatically higher rates of both in-person and cyberbullying compared to their heterosexual peers. This highlights the urgent need for inclusive, affirming, and protective school environments.

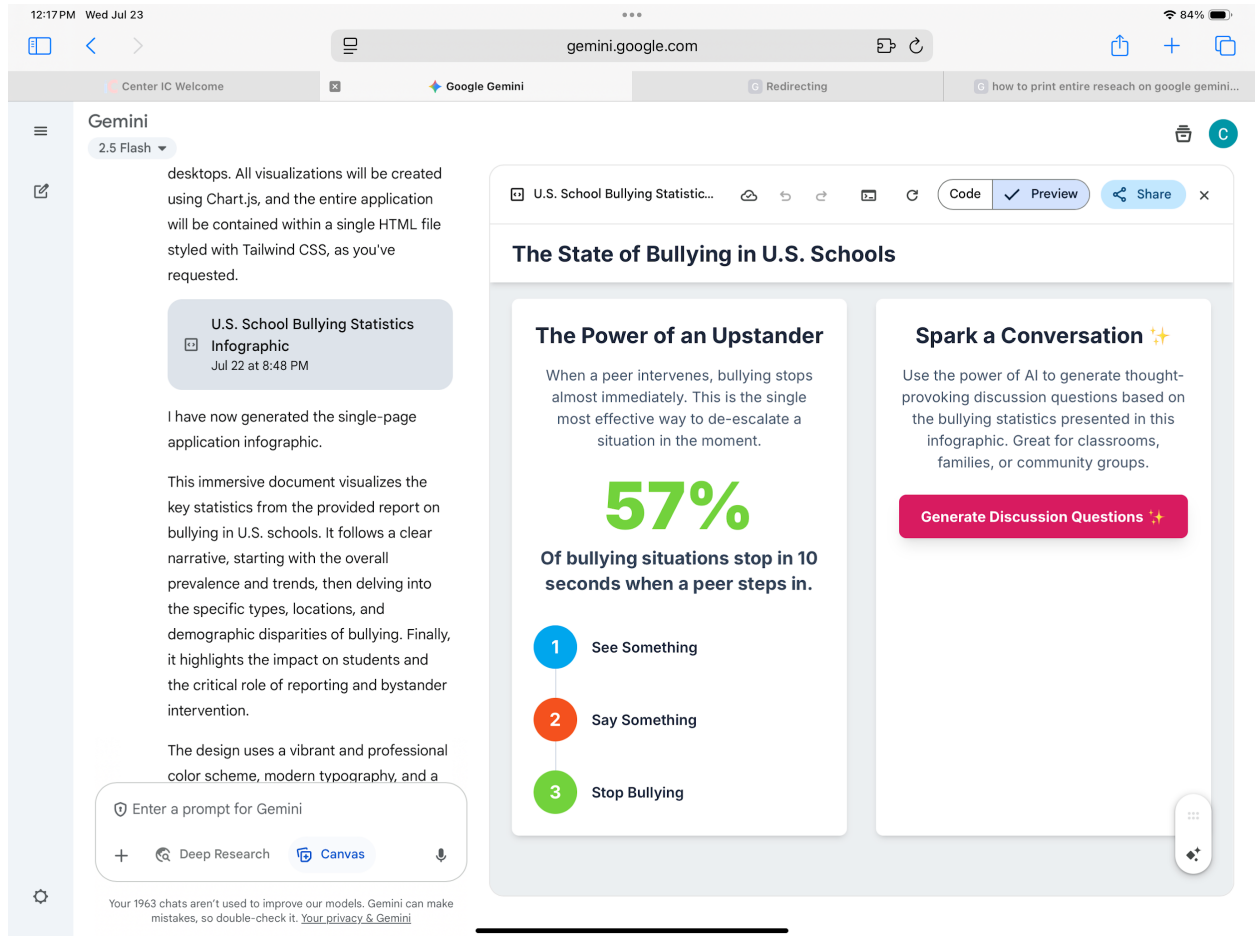

Type of Bullying	LGBTQ+ Students (%)	Heterosexual Students (%)
In-Person Bullying	33	18
Cyberbullying	55	13

Of course. I will create a comprehensive, single-page infographic based on the U.S. school bullying statistics you've provided.

This immersive document will present the data in a clear, narrative-driven format. I'll use a vibrant color palette and a variety of charts to make the information engaging and easy to understand. The design will be fully responsive, ensuring it looks great on any device, from mobile phones to desktops. All visualizations will be created using Chart.js, and the entire application will be contained within a single HTML file styled with Tailwind CSS, as you've requested.
